CLOUD COMPUTING

Cloud computing is the delivery of computing as a service rather than a product, whereby shared resources, software and information are provided to computers and other devices as a utility (like the electricity grid) over a network (typically the Internet). Clouds can be classified as public, private or hybrid.

Snowstak Cloud Computing Practice enables our clients to explore and evaluate the opportunities the Cloud offers can easily transition your business by maximizing benefits. We provide a strategic assessment of your business needs and customized implementation plan to facilitate the transition to a Cloud-based model. As a result, clients reduce spending on technology infrastructure, streamline their processes, globalize their workforce and improve accessibility while shortening training time and new employee learning curve.

A cloud service is any resource that is provided over the Internet. The most common cloud service resources are 'Software as a Service (SaaS)', 'Platform as a Service (PaaS)' and 'Infrastructure as a Service (IaaS)'.
